

TESTS:

do tests on expandable parts before starting the series production.

1 GLUES, ADHESIVES AND PROCESSING:

for each product (glues, adhesives, paints, etc) and for each process, it is advised to try the product/process on an expandable part before starting the series production. The confirmation of suitability of the tested product/process must be given after the chemical/physical reaction being fully completed. For further information, contact EUMirror customer support or check the technical datasheets or instructions of the products/machineries to be used.

2 OUTDOOR USES:

As per standard in this industry, there is no warranty for outdoor uses. EUMirror standard products are regularly used outdoor without problems, but with some precautions: a) the back and sides must be protected from the direct and continuous contact with water b) in places with high humidity, after the cut, protect the cut sides from humidity c) it must not be hung with glues or bi-side adhesives applied directly to the back coating. You can receive more information on outdoor uses from our EUMirror Customer Service.

3 RESPONSIBILITIES:

all the responsibilities for the not executed tests (or not properly executed tests) or for outdoor applications are at the Customer's charge.
